

Limitations of the n8/n12 and MOTIF XS with mLAN connection

Thank you for using Yamaha products.

Please keep in mind that the following limitations of Yamaha Extensions for Steinberg DAW apply when connecting the multiple n8/n12/MOTIF XS instruments to a computer via mLAN Driver/mLAN Tools.

- Limitation of the Auto Settings of Remote Device

The Auto Settings of Remote Device function is available only for one n device and one MOTIF XS.

When two or more n instruments and two or more MOTIF XS instruments are connected to a computer via mLAN Driver/mLAN Tools, the instrument having the MIDI remote port connected to the smallest MIDI port number is registered as the remote device.

When one MOTIF XS and one n are connected to a computer via mLAN Driver/mLAN Tools, both of the instruments are registered as remote devices.

- Limitation of project templates

The project templates for the n8/n12/MOTIF XS can be used only when one of the n8/n12/MOTIF XS is connected to a computer and all MIDI/Audio ports of the connected instrument are logically connected to the MIDI/Audio ports of a computer from the smallest number in order.

If you use two or more n8/n12/MOTIF XS instruments, or have changed the logical connection setup, correct the bus setup of the project template before using.
